Effective Scrum Developer with AI Day

Immerse yourself in the evolving landscape of Agile development with our "Effective Scrum Developer with AI Day" course. This 3-day class is designed for professional software developers aiming to enhance their Scrum adoption and technical skills, this course combines foundational Scrum principles with advanced AI techniques, empowering participants to become more proficient and innovative in their roles within a Scrum team.

Participants will gain hands-on experience and insights into how AI can enhance Agile practices, streamline development processes, and improve product delivery efficiency. This specialized addition ensures that you stay at the forefront of technology and agile methodologies.

What You'll Learn:

Scrum and Agile Engineering Practices:

Understand and engage with the core principles of Scrum, tailored for developers.
Collaborate effectively within a Scrum team to meet Sprint and Release goals.

Enhanced Development with AI:

Explore the integration of AI tools and techniques in Agile environments to accelerate development cycles and improve decision-making.

Apply AI to enhance productivity in Test Driven Development (TDD), Continuous Integration, and Automated Refactoring .

Core Technical Skills:

Strengthen foundational skills in key areas such as Test Driven Development, Continuous Integration, and Refactoring.
